Graph Colouring Sequential Algorithm:

→ Choose Arbitrary point to start from

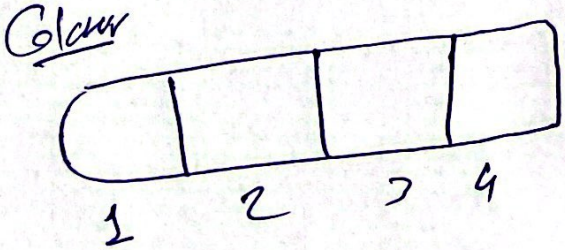

→

// base case
idx = # vertices
↳ All nodes have been coloured
return true

// iterate over all possible colours

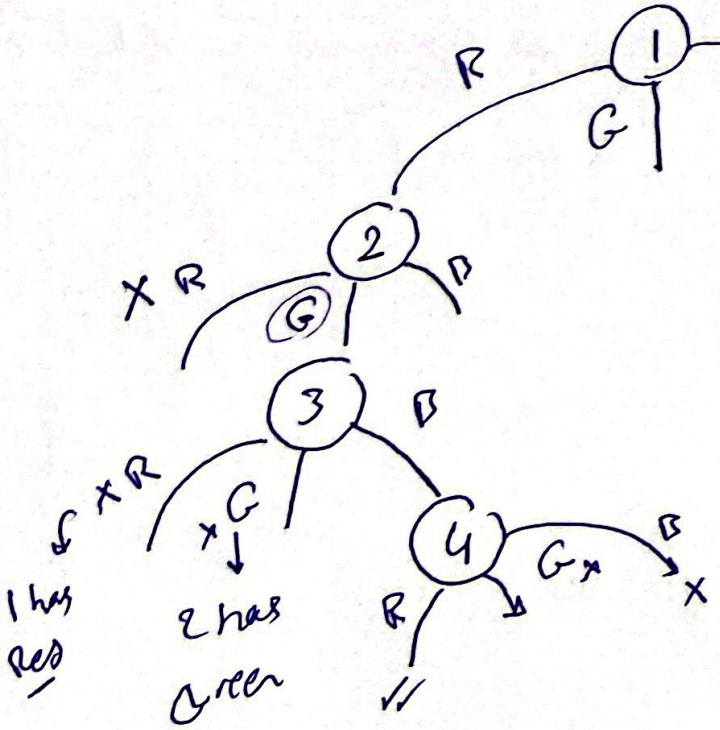

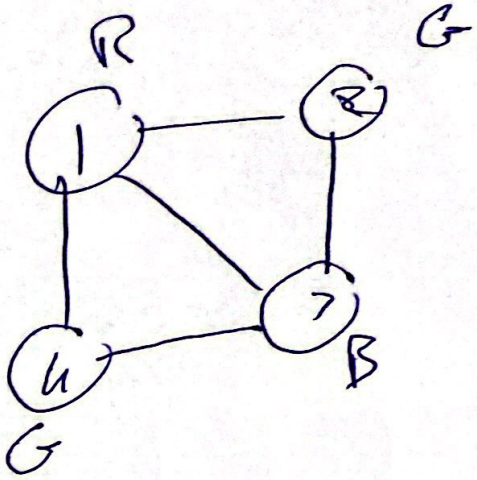

$C = \{C_1, C_2, C_3\}$

// iterate over the neighbours of the current node
if they have this colour
try another colour.

else
- mark this node with current colour
- mark the node as visited
- Go to the next unvisited Node
